DETAILED ACTION

Claim Objections

Claims 6-14 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim must refer other claims in the alternative only and must not depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 6-14 have not been further treated on the merits.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-5 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification does not clearly set forth how tension is produced in the longitudinal web (36) to hold the wiper strip. While it appears that the width of the rails plus the width of the web being greater than the width of the inner edges of the first L-leg would provide for compression of the web (see the paragraph bridging

Art Unit: 1744

pages 1 and 2 of the specification wherein it is set forth that the web is compressed) or possibly tension in the holder, it is unclear how this would develop tension in the web of the wiper strip.

Clarification is requested.

Response to Arguments

Applicant's arguments filed 23 January 2004 have been fully considered but they are not persuasive. As set forth above, it does not appear applicant's web is actually in tension. While applicant refers to figure 3 to illustrate the mounting process, and states that figure 4 shows how by simple pushing in the direction of arrow (76) the carrying rails can be introduced into the connector, such does not explain how the web (36) would be in tension. Figures 3 and 4 clearly show and the specification states (page 6) that the combined width of both rails (62) and web (64) is greater than the distance (60) defined by the holder body (42). Such will provide for compression of the web, not tension.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
